

drunomics is an expert for developing high-performance web applications. We deliver digital experiences by leveraging the innovative open-source technologies Drupal 8 and Vue.js. By developing ready-to-go solutions for our clients, we kick-start our projects and tailor them to the client's needs with the help of our agile development workflow. Our extensive knowledge, processes and automated quality assurance system ensure our project's success!

Drupal 8 / PHP Backend Developer (m/f)

Role description

- Continuous development and maintenance of Drupal 8 based sites
- Plan & implementation of new features for our products
- Perform code reviews & improve the automated test suite(s)
- Participate in our agile development process (Sprint planning, review & retro, Peer reviews)

Your profile

- Solid knowledge of Drupal 8 and/or PHP frameworks like Symfony
- Experience working with associated services (MySQL, Redis/Memcache, Varnish, Solr/Elasticsearch)
- Ability to handle your local work environment (Docker, NGINX, ...)
- Experience of working with Git (Pull Requests), SSH and the Linux shell

Your qualifications

- Background in software development and computer science
- Fluent English skills, spoken and written. German is a plus.
- You are a team-player, communicative, self-reliant, adaptive
... and you love to continuously improve and grow with us!

What we offer

- Interesting projects with high-profile customers located in the DACH area!
- Work at one of our offices in Austria (Vienna, Linz) or join us remotely!
- Employment on-site or freelance remote position possible (no agencies, EU timezone is required)
- Low hierarchies, friendly work atmosphere & room to improve!
- Full or part time position (20 to 40h / week) with a decent salary (starting with 2.800€ full time – payment depending on qualification and experience).
