

Drupal / PHP Backend Developer (f/m)

drunomics – The aspiring Drupal company in Vienna!

We support organizations using Drupal with our expertise and high-quality development services. Our clients value our longstanding experience developing Drupal-based web applications .

Your mission

- Join our team to develop high-quality web applications using Drupal 8.
- Perform code reviews and help improve the automated quality assurance process.
- Plan and implement technical solutions that meet the product requirements.
- Continuously improve and support existing applications!

Your profile

- You have experience developing with Drupal OR you have experience as PHP developer using frameworks like Symfony or Laravel.
- You know how to handle databases (MySQL) and caches (Varnish, Redis/Memcache).
- You have experience using version control systems (e.g. Git), issue-tracking systems (e.g. Jira, Youtrack) and SSH comes naturally to you.
- Ideally, you also have experience with Solr or DevOps tools like Jenkins, Docker, and Bash scripting.

Your qualifications

- You have experience in the development of larger web applications.
- Bachelor's or Master's degree in computer science or a related discipline is a plus, but not required.
- You possess proficient English writing and speaking skills, German is a plus.
- You are a team-player, self-reliant, adaptive, communicative
- ... and you love to continuously improve and grow with us!

What we offer

- Agile working methodologies (i.e. Scrum) and a great work climate.
- Possibility to work from Vienna, Linz, or remotely with occasional travel to our Vienna office.
- Full-time employment (38,5h/week) with flexible working hours.
- Time for continuous self-improvement and supporting Open-Source!
- Salary depends on your qualification, starting at € 3.000 gross salary / month.
